Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments:

Applicant's representative described the invention and discussed rejected claims and cited prior art. The representative emphasized on the features of the claimed invention: searching on the abstract or representation of the document and generating a list or related document ranked based upon relevance of ... FIRST FIELD (i.e., this is an actual XML field which the system has mapped from the content query document). The first representation includes a set of terms and one or more weighted values associated with EACH term (i.e., not an overall ranking of the related document)... in the reference XML document. Furthermore, the claimed invention generating a link for each of the one or more related documents ... the links points to a RELEVANT FIELD(s) within its related documents.

Applicant's representative further discussed how proposed amended claims overcome the prior art of record. Examiner thought that the proposed amended claims appear to overcome the cited prior art. However, the amendment would likely raise new issues that would required further consideration and/or search. Applicants may further define the limitations of the claims by including the mapping between the content document and the actual fields of xml document.

Next, the 101 issues were discussed. Examiner indicated that claim 24 is for an apparatus with the means for function, the claim appears to contain all software means, it does not have hardware to enable the functionality to be realized. Examiner requested the representative to point to Specification for disclosure which contain hardware support for the claim. The representative pointed to Fig. 1, element 110, reference Document Input, element 112 Field Input, and element 102, Engine, he asserted that without hardware the system would not be able to communicate and transfer information to the search engine. Examiner stated it could be all software that processes the input field. Claim 24 was consulted with the workgroup advisor, claim 24 appears to be statutory.
